Thurs

"For example, information about oil or gas pipelines might be overlaid with maps of seafloor terrain, fishing activity and the presence of species such as fish, sea grasses or corals.

"The depth and flexibility of the data that's available is providing government, industry and the community with an unprecedented level of information that can support better decision making," Dr Lucieer said.

Seamap Australia was funded by the Australian National Data Service (ANDS), and has received support from Integrated Marine Observing System (IMOS), National eResearch Collaboration Tools and Resources (Nectar) and Research Data Services (RDS).

The supporters are all facilities of the Federal Government's National Collaborative Research Infrastructure Strategy (NCRIS).
