Secret life of shy skates investigated in world-first study

The first major study into the elusive Maugean skate is being undertaken by the

The Maugean skate is known from only two localities, Macquarie Harbour and Bathurst Harbour in western Tasmania and because of this limited range the species is listed as endangered.

The research will focus on Macquarie Harbour and will use acoustic tracking technology to examine skate movement patterns and habitat utilisation. In addition, non-destructive techniques will be used to examine its r(in)e4()JTJ,eD3 0 1 92.184 393.07Tmprbou

the salmon industry to identify and act to minimise any impacts that may be linked to this unique species.

also help better understand the level of risk posed by human activities

and seasonal distribution patterns, will help develop strategies to minimise

ly to our understanding of the nature of

The project is supported by approximately \$264,000 funding from the Australian Government through the Fisheries Research and Development Corporation.
